¹The cardinal numbers are used in simple counting or in answer to "how many?" The words for these numbers may be used as nouns (he counted to *twelve*), as pronouns (*twelve* were found), or as adjectives (*twelve* boys).

²The roman numerals are written either in capitals or in lowercase letters.

³The ordinal numbers are used to show the order or succession in which such items as names, objects, and periods of time are considered (the *twelfth* month; the *fourth* row of seats; the *18th* century).

⁴Each of the terms for the ordinal numbers excepting *first* and *second* is used in designating one of a number of parts into which a whole may be divided (a *fourth*; a *sixth*; a *tenth*) and as the denominator in fractions designating the number of such parts constituting a certain portion of a whole (one *fourth*; three *fifths*). When used as nouns the fractions are usually written as two words, although they are regularly hyphenated as adjectives (a *two-thirds* majority). When fractions are written in numerals, the cardinal symbols are used ($\frac{1}{2}$, $\frac{3}{4}$, $\frac{5}{6}$).

⁵The arabic symbols for the cardinal numbers may be read as ordinals in certain contexts (January 1=January first; 2 Samuel=Second Samuel). The roman numerals are sometimes read as ordinals (Henry IV=Henry the Fourth); sometimes they are written with the ordinal suffixes (XIXth Dynasty).

¹The American system of nomenclature for denominations above one million is the same as the French system, and the British system corresponds to the German. In the American system each of the denominations above 1,000 millions (the American *billion*) is 1,000 times the one preceding (one trillion=1,000 billions; one quadrillion=1,000 trillions). In the British system the first denomination above 1,000 millions (the British *milliard*) is 1,000 times the preceding one, but each of the denominations above 1,000 milliards (the *British billion*) is 1,000,000 times the preceding one (one trillion=1,000,000 billions; one quadrillion=1,000,000 trillions).

²For convenience in reading large numerals the thousands, millions, etc. are usually separated by commas (21,530; 1,155,465) or by half spaces (1 155 465). Serial numbers (as a social security number or the engine number of a car) are often written with hyphens (583-695-20).
